

Make check-in easy with **Auto Arrival**

Getting people to check-in and out of your property can be difficult and time consuming - and this latest feature solves just that.

Auto-Arrival does the heavy lifting for you by automating the check-in and out process as much as possible, while still balancing the importance of health and safety compliance.

Why is it important?

Encourage check-ins

Automatic arrival reminders encourage contractors and visitors to check-in without you having to do a thing.

Keep everyone safe

Stop second guessing who's on your property. Be confident they've checked in and know the property risks and rules.

Less follow-up

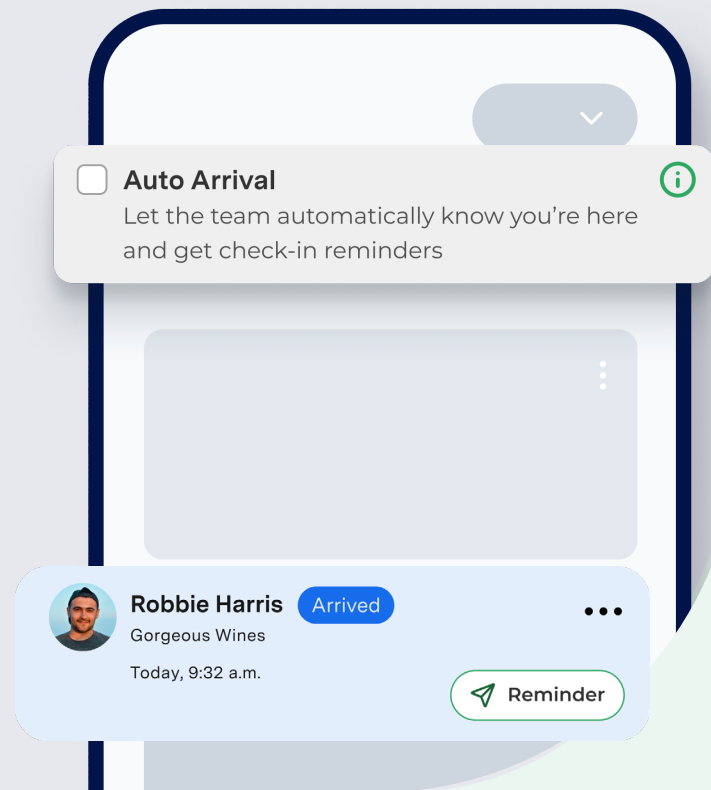

With fully automated check-out, end the day knowing everyone is safely off your property.

How does it work?

Checking-in

- First, a contractor, visitor or team member needs to enable Auto-Arrival in the mobile app
- Once they pass your geofence, they'll automatically be marked as "arrived" and will receive a notification reminding them to check-in
- If they don't check in, you can send them a reminder notification with one simple click

Checking-out

- Once Auto-Arrival is enabled, checking out of a property is automatic
- Once a contractor, visitor or team member leaves your property, they'll be automatically checked out and you'll receive a notification letting you know they've left
- Contractors will need to check out manually if they are using overdue dialler
